## **REVIEW PROBLEMS**

- 1. Prove that through any given set of 5 points in the plane there passes a conic curve, i.e., a curve given by the equation  $ax^2 + by^2 + cxy + dx + ey + f = 0$ .
- 2. Prove that given 3 points in the plane with distinct first coordinates, we may find a polynomial of degree 2 which interpolates these points.
- **3.** Find the matrices of rotation by  $45^{\circ}$  around the *x*-axis, and around the *y*-axis, and prove that these two operations do not commute,
- 4. Derive the formula for the Fibonacci sequence.
- 5. Review all the quizzes and midterms.
- 6. Review all of the homework problems.
